M7 Premium

Hand-Carried Ultrasound System

Expanding Excellence in Performance

The Mindray M7 Premium ultrasound system epitomizes the optimal combination of advanced imaging and miniaturization technologies. Mindray's research and development engineers employ a unique design architecture enabling complex technologies to be built into the system's compact laptop design plus provide energy efficiency and high reliability. The M7 Premium system's exceptional image quality, user experience, and versatility have expanded the performance and flexibility of hand-carried ultrasound systems.

Technologies within Reach

Tissue Doppler Imaging with Quantitative Analysis (TDI and TDI-QA)

Supported by Mindray's unique 3T™ technology, the M7 Premium system significantly improves the performance of Tissue Doppler Imaging. Combined with a comprehensive quantitative analysis package enabling parameter outputs such as velocity, strain and strain rate, TDI-QA performs with ease and is ideal for bedside scanning.

iNeedle+™

Second generation iNeedle+ technology allows automatic needle angle detection and enhances needle visibility during interventional procedures.

UWN+ Contrast Imaging (Ultra-Wideband, Non-linear)

Mindray's second generation UWN+ (Ultra-Wideband Non-Linear) CEUS imaging uses both harmonic and fundamental signals to improve contrast and temporal resolution during CEUS studies.

New Transducers and Applications

The new C11-3s micro-convex transducer comes with improved image quality. The new L16-4Hs linear array (hockey stick) transducer will allow the M7 Premium system to address the clinical needs in both intraoperative vascular and MSK applications.

Optimized Efficiency

The M7 Premium system also provides efficient operation with automatic measurement tools, flexible connectivity, and user-friendly ergonomics. This results in helping to reduce exam times and improve the scanning experience.

15" high resolution TFT LCD display with 170° viewing angle

Background data multi-tasking, processing, and management enable shortened examination time

User programmable exam presets for quick start and consistency

Solid state hard drive (SSD)

Superior computing power enables instantaneous response to user commands and shorter cycle time

Trackball allows for easy operation

iTouch™ : one-button image optimization

TGC: detail, customized image optimization

Natural Touch Elastography

Based on Mindray's exclusive technology, Natural Touch Elastography is able to automate steps during breast, thyroid, or MSK examinations, thus reducing dependence on the user's operating technique and improving reproducibility for increased clinical utility.

Smart Track

Smart Track enables automatic color box optimization and accurate Doppler gate placement, ensuring the optimal and best display for color flow and spectral Doppler signal.

Neonate Intracranial Flow

Universal Diagnostic Solutions

Email: sales@u-d-s.com / Phone: 760-754-3288

Website: www.ultrasoundportables.com

Location: 2410 La Mirada Dr. Vista, CA 92081 USA

At Universal Diagnostic Solutions (UDS) we sell new and used ultrasound imaging equipment as well as other diagnostic medical equipment.

We have an in-house service department dedicated to providing high quality technical support and service. UDS has been doing business since 2004 and has a proven reputation for providing value, excellent customer service, post sale support and integrity. Our warehouse is conveniently located in Vista, California, midway between San Diego and Los Angeles.

UDS is an FDA registered company, in compliance with the California State board of Pharmacy and authorized to legally sell class II medical devices.
